

CLAIMS

1. A liquid crystal display device, comprising:
  - a liquid crystal panel;
  - a light guiding plate for illuminating the
  - 5 liquid crystal panel;
  - a bezel covering a periphery of the liquid crystal panel;
  - a frame on which the liquid crystal panel is mounted;
  - 10 a screw connecting a side wall of the bezel to the frame; and
  - a rear cover having a portion which extends from a back side of the light guiding plate beyond a position of the screw and which has a hole
  - 15 through which said screw passes.
2. A liquid crystal display device according to claim 1, wherein the frame has a threaded hole in which the screw is engaged.
3. A liquid crystal display device according to
- 20 claim 1, wherein the frame surrounds the light guiding plate.
4. A liquid crystal display device according to claim 1, wherein the frame has a positioning means for positioning the liquid crystal panel.
- 25 5. A liquid crystal display device according to claim 1, wherein said portion of the rear cover extends to a front surface of the bezel and the bezel has a hole in which said portion of the rear cover can be fitted.
6. A liquid crystal display device according to
- 30 claim 1, wherein a control circuit board connected to the liquid crystal panel is arranged between the side wall of the bezel and the frame.
7. A liquid crystal display device, comprising:
  - a liquid crystal panel;
  - 35 a light guiding plate for illuminating the liquid crystal panel;
  - a bezel covering a periphery of the liquid

crystal panel;

a frame on which the liquid crystal panel  
is mounted;

a screw connecting a side wall of the  
5 bezel to the frame;

a rear cover provided on a rear surface of  
the light guiding plate; and

a fixing member securing a portion of the  
rear cover and a side wall of the bezel together.

10 8. A liquid crystal display device according to  
claim 7, wherein the fixing member is arranged on an axis  
substantially passing through the screw, as viewed from a  
direction orthogonal to the liquid crystal panel.

9. A liquid crystal display device according to  
15 claim 7, wherein the frame has a threaded hole in which  
the screw is screwed.

10. A liquid crystal display device according to  
claim 7, wherein the fixing member is made of an  
elastically deformable clip.

20 11. A liquid crystal display device according to  
claim 7, wherein the fixing member has a first portion  
extending along the side surface of the frame and a  
second portion extending along the side surface of the  
bezel, said first portion being provided with a threaded  
25 hole to be engaged with the screw, said second portion  
being provided with a hole in which the screw is  
inserted, the screw being engaged in a threaded hole of  
the frame and the threaded hole of the first portion of  
the supporting member, through the hole of the second  
30 portion of the fixing member and the hole of the side  
wall of the bezel.

12. A liquid crystal display device according to  
claim 7, wherein the frame surrounds the light guiding  
plate.

35 13. A liquid crystal display device according to  
claim 7, wherein a light source and a reflector are  
provided on the side of the light guiding plate.

14. A liquid crystal display device according to claim 7, wherein the frame has a means for positioning the liquid crystal panel and the bezel.

5 15. A liquid crystal display device according to claim 7, wherein a control circuit board connected to the liquid crystal panel is located between the side wall of the bezel and the frame.
